UVEC 2026 HACKATHON:
GAMIFIED PROCESS FOR SUPPORTING MENTAL HEALTH

TaskTrek

Finally start what you have been avoiding,
one small step at a time.

Presented By:
Olivia Eskes, Tristan Tucker, Jasvin Kaur, Apoorva Eswara Murthi

Who it’s for & the underlying problem:

University Students

Essays, projects, and exam preperation with no clear first step.

People with ADHD

Starting a task is the hardest part, and balancing multiple together is even harder.

Anyone Overwhelmed

The same approach works for any large goal, not only coursework.

The difference from existing tools:

Type of tool	What it asks of you	If you fall behind
To-do list	Check-off all tasks in the list.	The list gets longer.
Streak tracking	Show up everyday.	You lose your streak.
TaskTrek	Take small steps.	Nothing happens.

Progress is always rewarded. This is regardless of people's size or frequency of contribution toward their goals.

The workflow:

1

Start a Goal

Name the goal you want to work towards.

2

Break it down

Add as many small steps as you need to make the goal easier to tackle.

3

Move steps

Drag and drop on a Kanban board to track task progression.

4

Earn points

Get 100 points per goal completed.

5

Get rewards

Unlock themes.

Designed so it can’t make things worse:

No competitive streaks

You are only competing with yourself. It will never be publicly displayed

Points are never lost

Your points can only go up. Points are never lost. Nothing can be bought with money.

No nagging

No pop-ups or reminders.

You set the pace

You choose the number of steps it takes to achieve your goal.

Key development features:

Streamlit front end

- we were going to make an app initially for the ease of everyday use, but we pivoted to a web-based application
- very simple API, and emphasis on human usability

Key integration points

- Python with Streamlit for the interface
- JSON file storage for user’s active tasks, points, completed tasks
- Leightweight, paid APIs or paid services

Live Demo of Current Implementation

Potential future additions:

AI integration

An optional AI that suggests small steps for any big task. You can use these suggestions, edit them, or instead manually input steps.

Priority focus

Need something due soon? Heavily prioritize certain tasks and hide other tasks.

Energy check-in

Indicate your energy level. If you are feeling low, you are suggested to work on an easier task.

Goals with friends

Option to add friends. You can share a goal or simply cheer each other on.

Start your trek now.
